

Port of Oslo

# ENVIRONMENT AND SAFETY

# ENVIRONMENT AND SAFETY

Sea transport is in itself a friendly alternative to hundreds of heavy trucks on the road. But as 20 per cent of Norway's population lives in and around the Port of Oslo the port has taken extra strides to ensure an environmentally friendly neighbourhood.

## Our aim and objectives are to:

- reduce spills from port activities
- maximize efforts to limit noise
- reduce air pollution from berthed ships and landslide activities
- control wasted disposal

Reception facilities for ship generated waste, ensures a more environmental handling of the waste.

The port of Oslo also puts great emphasis on safety issues. The vessel traffic service is designed to promote safety and efficiency and to protect the environment in the Oslofjord and adjacent waters.

[Welcome to the Port of Oslo - a safe and environmentally friendly gate to the Norwegian market.](#)

-  Dredging
-  Capping with clean materials
-  Possible capping later
-  Deep sea disposal site
